

# PHOENIX DATA CENTER (PHX-1)

## About PHX-1

Located in Phoenix, Arizona, this facility features a highly innovative and efficient modular pod-based architecture. SingleHop opened this facility in early 2012 with a starting capacity of over 2,000 servers. Due to the unique architecture, the facility can be scaled to support many more servers than its initial capacity over time, as needed, making it SingleHop's most scalable data center.

## Overview Information

|                          |   |
|--------------------------|---|
| Official Name            | Phoenix 1 (PHX-1)   |
| Physical Location        | Phoenix, AZ   |
| Security                 | N + 1 - Physical Guards, Access Control, Retina Scanner, Security Cameras, Key Cards                |
| Redundant Infrastructure | Minimum of N+1 redundancy on both electrical and mechanical Redundant Infrastructure infrastructure |
| Max Power Load           | 1.8 MW of critical IT Power   |
| Max Server Capacity      | 2,000+ servers  |
